

Do you want to start a Site Reliability Engineering journey?

Eveline Oehrlich, Research Director Research in Action

While developers want and must release new features or capabilities, the infrastructure & operations team needs to make sure that nothing brakes. With the arrival of Site Reliability Engineering (SRE), that struggle can be turned into success by collaboratively fulfilling the goals of the business stakeholder – better and more reliable applications or digital services. SRE has also spurred a few newcomers to the IT Automation tool space. We are excited to have met and worked with one of them...[Sensai.io](#)...take a look at [this](#) and then explore their promising offer of next generation AIOps.

As always, stay human.
